Dify: Open-Source Agentic Workflows

Visual orchestration for modern AI applications.

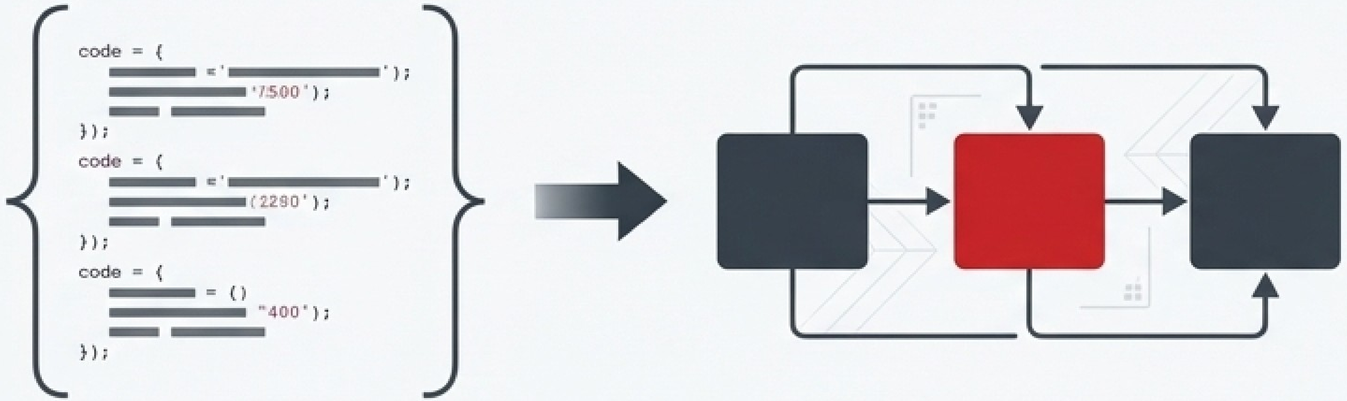
DBS

01 Introduction to Dify

Platform Overview & Core Benefits

DBS

Defining Dify



An open-source platform for building agentic workflows.

Define processes visually, connect existing tools and data sources, and deploy **AI applications** that solve real problems.

> **Dify** stands for
> **D**o It **F**or **Y**ou.

Core Platform Advantages

Visual Workflow Builder

Drag-and-drop canvas to design AI pipelines without writing backend code

Multi-modal Support

Handle text, images, documents, and audio in a single workflow

Production Ready

Deploy as web apps, APIs, MCP servers, or embedded widgets instantly

Open Source

Self-host on your own infrastructure or use Dify Cloud

Extensible

Connect to any LLM provider, knowledge base, or external API

02

Building Workflows

Multi-Platform Content Generator Case Study

DBS

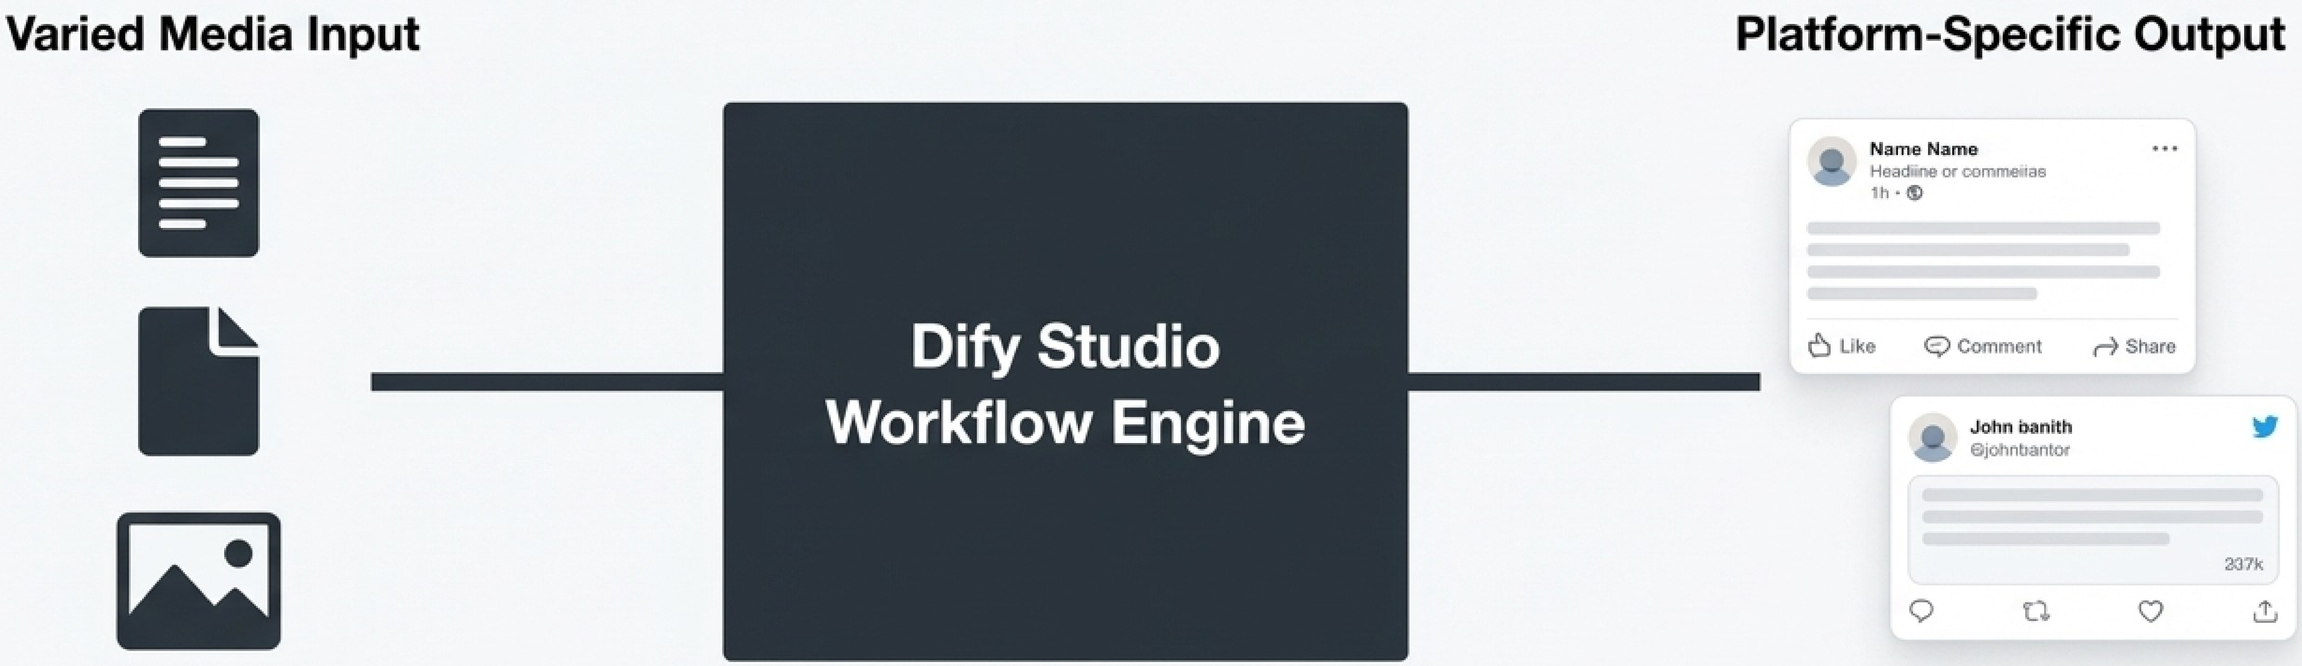
Case Study: Multi-Platform Content Generator

Context:

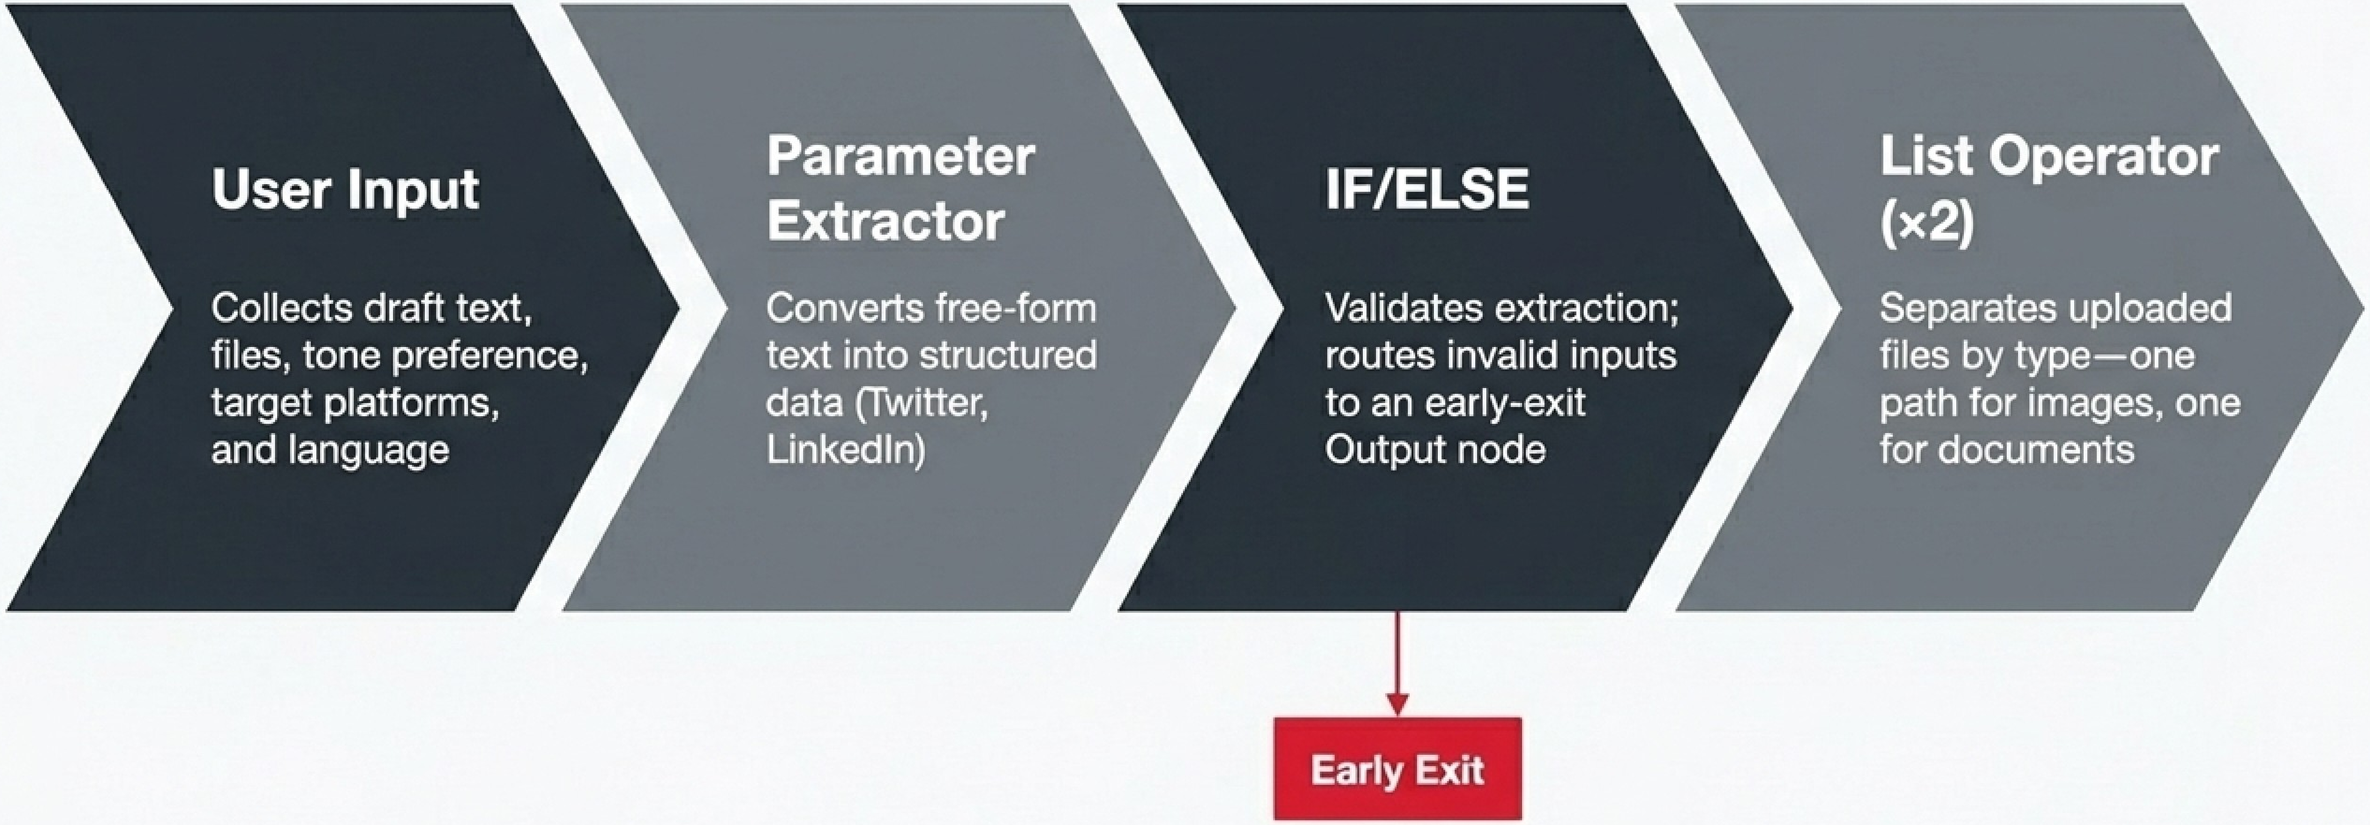
Creating a new workflow from scratch in Dify Studio named **Multi-platform content generator.**

Objective:

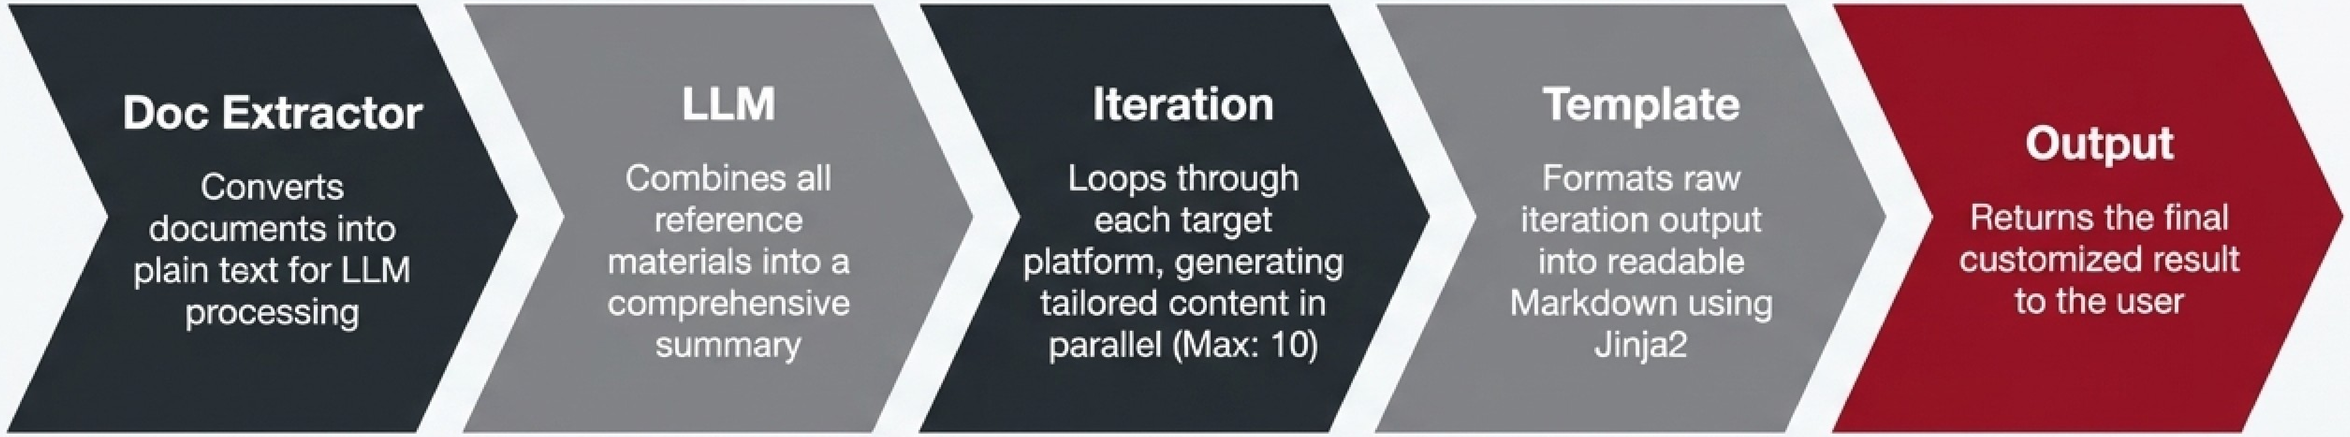
Accept varied media formats (text, documents, images) and seamlessly transform them into platform-specific social media posts.



Pipeline Architecture: Ingestion & Routing



Pipeline Architecture: Processing & Generation



From Build to Production

1

Verify

Use Test Run to execute and verify the workflow logic.

2

Inspect

Review cached variables in the Variable Inspector to make precise data adjustments if needed.

3

Deploy

Click Publish to make the workflow instantly live and shareable.

03

Platform & Deployment

Hosting Options & Ecosystem Resources

DBS

Infrastructure & Deployment Options

Dify Cloud

- Managed SaaS
- Workspace automatically created on first login.

Community Edition

- Self-hosted via Docker
- One workspace created at initial installation.

Enterprise

- Advanced access controls
- SSO integration
- Dedicated enterprise support.

Navigating the Dify Ecosystem

Community & Navigation

Forum: Community discussion at forum.dify.ai.

Changelog: Release updates on GitHub.

Tutorials: Advanced walkthroughs (e.g., customer-service-bot).

Next Steps Learning Path

02 **Core Concepts:** Understand app types, variables, and the DSL.

03 **Workflow Nodes:** Deep dive into every specific node type.

04 **Building Applications:** Learn shortcuts, advanced orchestration, and error handling.
